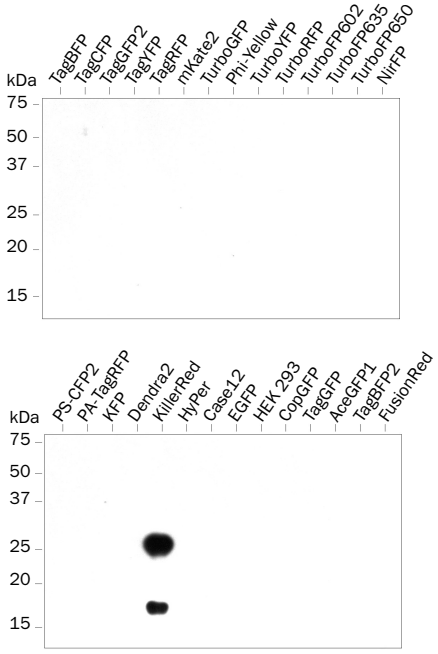
Anti-KillerRed antibody

Product	Cat.#	Lot.#	Size
Anti-KillerRed antibody	**AB962**	96201240513	200 µg

Use

- Western blot
- Immunoblotting
- ICC
- ELISA



Western blot detection of fluorescent proteins using anti-KillerRed antibody.

Description

Rabbit polyclonal antibody against KillerRed, KillerOrange, ArrestRed, and JRed.

Specificity: The antibody has been selected to recognize both denatured and native KillerRed, KillerOrange, JRed and ArrestRed. The antibody shows little or no cross-reactivity with other fluorescent proteins tested.

Immunogen: Full-length recombinant denatured KillerRed.

Antibody preparation: Full-length recombinant KillerRed was purified from transformed *E. coli* using organic extraction and hydrophobic chromatography. Antibody was produced in rabbits immunized with the recombinant denatured KillerRed and purified by KillerRed affinity chromatography.

Formulation: Lyophilized from the PBS buffer containing 0.05% NaN_3 and 0.5% trehalose; pH 7.4.

Reconstitution: Reconstitute with sterile water or 50% glycerol to a concentration of 1 mg/ml.

Storage: Lyophilized samples are stable for twelve months from date of receipt when stored at −20 °C. The presence of silica gel drier is advisable.
Reconstituted with sterile water, antibody can be stored at 2 – 8 °C three months without detectable loss of activity.
Reconstituted with 50% glycerol, antibody can be stored at −20 °C in a manual defrost freezer for six months without detectable loss of activity. Aliquot antibody upon reconstitution. Avoid repeated freeze / thaw cycles.

Recommendations for use

The antibody can be used to recognize KillerRed, KillerOrange, JRed, ArrestRed and their fusions.

Working concentrations:
For Western blot use at a dilution of 1 : 1 0000;
For ELISA use at a dilution of 1 : 20 000;
For immunocytochemistry use at a dilution of 1 : 5 000.

Note. Optimal dilutions/concentrations should be determined by the end user.

Tissue (cells) fixation for immunohistochemistry: Formaldehyde (formalin, paraform) fixation is recommended. For example, tissues can be fixed in PBS containing 4% formaldehyde for 10–15 min, treated with 0.1% saponin in PBS for 10–15 min, and washed three times in PBS.

Sample preparation for Western blot: To a sample containing 10–100 ng of a target protein, add an equal volume of 2X SDS-PAGE sample buffer. Heat the sample at 95 °C before loading on a gel or spotting on a membrane (for dots).
